INSTRUCTIONS
Stroke v2.0 Common Data Element (CDE)
Public Review

The Stroke v2.0 CDE Working Group and the NINDS CDE Team have released a draft version of the Stroke v2.0 CDEs for public review. We are in the process of finalizing these documents and would like to urge you to help by contributing your expertise during this public review period. Information about the NINDS CDE project can be found at https://commondataelements.ninds.nih.gov.

This Stroke v2.0 CDE Public Review package contains the following documents:

- Instructions (current document)
- Roster of contributors
- Materials prepared by the working group, which include:
    - Template case report form (CRF) modules
    - Instrument recommendations
    - Guidance documents
- Comments spreadsheet which can be filled out and sent to **NINDSCDE@emmes.com**

The CRF modules are template data collection forms that include the CDEs identified and defined by the Stroke v2.0 Working Group. These may be used as the building blocks for study data collection forms. Each CRF will have a corresponding data dictionary to define the CDEs on the form, which will be posted with the finalized v2.0 recommendations.

Please send all comments to NINDSCDE@emmes.com by **April 8, 2020.**

After this open comment period, the Stroke v2.0 Working Group will review and revise the recommendations as needed. The Stroke v2.0 CDE recommendations will be posted by **June 2020.**
