Child Behavior Checklist (CBCL) Problem Behaviors subscale

Availability:	<p>Please visit this website for more information about the instrument:</p> <p><u>Achenbach System of Empirically Based Assessment</u></p>
Classification:	Supplemental for Traumatic Brain Injury (TBI)
Short Description of Instrument:	<p>The Child Behavior Checklist measures a child’s competencies by using their parent’s perception of their performance on three scales, which include activities, social and school. Separate forms for ages 1.5 to 5 years and 6 to 18 years, as well as separate forms to be filled out by the parent/caregiver or teacher, are available. Scores for three competence scales and a total competence score can be computed.</p> <p>The CBCL can be completed independently by the caregiver or administered by a professional familiar with the CBCL manual. Test can be completed by paper/pencil, online, or on a scannable form. The entire test, which includes the school competence scale, lasts approximately 25-30 minutes. Skills commensurate with at least a Master’s degree level in psychology, social work, or special education are recommended for interpretation.</p>
Scoring:	<p>Raw scores, <i>t</i> scores (M=50, SD=10), and percentiles are given based on test results. The value of <i>t</i> scores for each range varies depending on the scale; in some scales higher <i>t</i> scores are associated with normal functioning and on others lower <i>t</i> scores are associated with normal functioning.</p>
