### Availability:
This instrument is not available on the NINDS website. To obtain the scale, contact:
Edna Foa, PhD ([foa@mail.med.upenn.edu](mailto:foa@mail.med.upenn.edu))

### Classification:
**Exploratory:** Spinal Cord Injury (SCI)-Pediatric (ages 8-18 years old)

### Short Description of Instrument:
This is a 26-question self-report scale that measures the PTSD diagnostic criteria and symptom severity in children ages 8 to 18 years old.

### Scoring:
- Items are rated on a 4-point frequency scale; functional impairment items are scored as “0” (absent) or “1” (present).
- The total symptom severity score ranges from 0-51 and total severity-of-impairment score ranges from 0–7.
