

## Pediatric Test of Brain Injury (PTBI)

Availability	Please visit this website for more information about the instrument: <a href="#">PLEASE CLICK HERE FOR MORE INFORMATION</a>
Classification:	<b>Supplemental:</b> Traumatic Brain Injury (TBI)
Short Description of Instrument:	<p>The Pediatric Test of Brain Injury (PTBI) measures neurocognitive and linguistic skills after brain injury in children. It is designed to be used in the acute stage for a baseline measure and then in subsequent stages of recovery. It is criterion-referenced and provides cutoffs for appropriate levels of ability for different ages for 10 subtests.</p> <p>The PTBI is designed for children 6 to 16 years of age who are recovering from TBI.</p> <p>Administration is approximately 30 minutes long and is in an interview format and can occur in one or two sessions.</p>
Scoring:	The PTBI consists of ten subtests: Orientation Tasks, Following Commands, Word Fluency, What goes Together, Digit Span, Naming, Story-Retelling, Yes/no/maybe, Picture recall and Signature and Story retelling-Delayed. An ability score can be calculated for each subtest.
