

## Word Memory Test

Availability	Please visit this website for more information about the instrument: <a href="#">PLEASE CLICK HERE FOR MORE INFORMATION</a>
Classification:	Supplemental for Traumatic Brain Injury (TBI)
Short Description of Instrument:	<p>The Word Memory Test is a computerized test of verbal memory and symptom/performance validity, in which patients are presented 20 semantically related word pairs. Six subtests include a mix of easy and difficult tests: Immediate Recognition, Delayed Recognition, Multiple Choice, Paired Associates, Free Recall and Long Delay Free Recall.</p> <p>Can be used in adults and children, although not appropriate for individuals who have less than a 3rd grade reading level.</p>
Scoring:	Raw scores and percent of answers correct are scored per subtest.
